

ON STAGE

An AI speaking coach that rehearses your next trade show — in your industry’s English — before you fly.

Last updated: 2026-07-29 · Runs offline, no API key · Android APK

What it is

ON STAGE helps **Chinese event- and exhibition-industry professionals working overseas** rehearse high-stakes English conversations *before* they happen — booth pitches, client walkthroughs, day-of crises, vendor negotiations — in the exact vocabulary of their trade.

The product is **not** “learn English.” It is “**don’t freeze at the moment that decides your career.**” Practise a work scenario with an AI counterpart, get instant bilingual coaching, and keep the pro phrases you earn.

Who it’s for

Primary: immigrated Chinese exhibition / event project managers working international shows (Frankfurt, Las Vegas, Dubai, Milan).

Wider circle: any Chinese professional who works overseas trade shows — factory sales teams, booth staff, sourcing managers.

Core pain: the blocker is *psychological, not proficiency* — capable readers who freeze in a live booth conversation — and the gap is *technical trade vocabulary under pressure*.

Core design principles

Rehearse a date, not a streak. A 30-day plan and show countdown sequence practice toward a specific trip.

Vertical-deep, not generic. Real floor phrases: *hard out, ISPM-15, ATA carnet, confidence monitor, drayage, load-in*.

Bilingual, English-lead. Chinese assist sits below English, muted; one toggle hides it.

Speaking-first. Real voice input, shadowing, and text-to-speech make it about *saying* the words.

No API, offline. The whole app runs in Mock Mode — usable on a plane or abroad.

22 scenarios across 3 categories

ON-SITE

Venue Walkthrough · Day-Of Crisis · Staff Briefing · VIP Guest Issue

Booth Qualification · Technical Q&A · Media Interview · Speaker Green Room

BUSINESS

Client Pitch · Vendor Negotiation · Post-Event Debrief · Sponsorship Pitch

Budget Presentation · Networking Reception · 30-Second Self-Intro · Lead Follow-Up

PRODUCTION

AV & Tech Briefing · Catering Coordination · Stage Manager Handoff

Customs & Freight Crisis · Show Services Desk · Show Teardown & Strike

Screens & signature features

Screen	What it does
Onboarding	3 bilingual steps → Device Check → Home
Device Check	Tells you if your phone can do English sound + voice input, each with a fix
Home	Scenario cards, 30-day plan hero, show countdown, shadowing, weekly progress
Practice	AI counterpart, coach notes, hints, real voice mic (text fallback), 6 turns
30-Day Plan	Day-by-day speaking program toward your show; progress bar, auto-check
Result	Measured grade, pro-phrase count, did-well / try-next, saved phrases
Phrase Bank	All saved phrases; add / tag / delete; TTS; filters
Settings	Chinese Assist, My Next Show, AI provider, voice test, device check

30-Day Speaking Plan (the hero)

One focused task a day across four phases — First Impressions → Deals → Build-Up → Show Week — mixing scenarios and shadowing. Progress bar, “Day N of 30”, auto-checks the day when you practise. Fully offline, built for a countdown to a specific trip.

Real voice input (no API key)

On-device speech-to-text: tap the mic, speak, watch your words transcribe, and it auto-submits. Falls back to a text box where voice isn't available.

Real scoring

Grade and pro-phrase count are measured from the trade vocabulary you actually use — more real terms, higher grade (A / A- / B+ / B / B-).

Under the hood

Layer	Choice
Framework	Expo SDK 56 (managed), React 19, React Native 0.85
Navigation	Expo Router (file-based, typed routes)
Speech out	expo-speech (system TTS; slow mode 0.75x)
Speech in	expo-speech-recognition (on-device STT, no API key)
Storage	AsyncStorage — settings, phrases, sessions, plan (all local)
AI	fetch dispatcher: Mock / Claude / OpenAI
Build	EAS Build → standalone Android APK (offline, no dev server)

Device-dependent features (handled gracefully)

Two features depend on the phone's system services. The app detects each and falls back cleanly — it stays fully usable with text + reading regardless.

Sound (English TTS) needs an English voice on the device. Some Chinese-market phones (Xiaomi/HyperOS) ship without one → speech is silent. Fix: install Google Text-to-Speech + English (US). Device Check and Settings report this.

Voice input needs an Android speech-recognition service (usually Google's). Where absent, the mic opens a text box instead — Device Check reports this on first launch.

Roadmap

Now (this build)	Real on-device voice input, 30-day plan, device check, standalone APK — all offline, no API.
Next	Live AI conversation via a small backend (adaptive coaching), pronunciation scoring, progress curve.
V2	B2B pilot — sell team seats to exhibit builders / agencies, manager reporting dashboard.
V3	Industry packs (Sales, Hotels), human-tutor marketplace, role-play of the user's own upcoming meeting.

Building the Android APK

Build-ready (eas.json preview profile → APK; expo-doctor 21/21). Two commands — the first needs your free Expo account:

```
eas login
```

```
eas build -p android --profile preview
```

First run creates the project + keystore (say yes), then a cloud build (~10–20 min) returns a download URL. Install the APK → runs like a normal app, fully offline. Voice input works in the installed APK, not in Expo Go.

ON STAGE — English rehearsal for the show floor.
